

ARE INDONESIAN OLDER PERSONS ADEQUATELY FINANCED?

DR EVI NURVIDYA ARIFIN

PROF ARIS ANANTA

This is a preliminary study on economics of population ageing in Indonesia, carried out in collaboration with Brata Sanjaya, Tanjung Artha Trahtama Puri, and Ahmad Irsan A. Moeis. It first analyses population age structure in Indonesia as a whole as well as by province and ethnic groups. It then examines what the older persons are doing and how they finance their life. It studies when they want to retire and at what level of retirement adequacy. Finally, it studies the perception of the older persons on their financial condition. The analysis uses several data sets collected by Statistics-Indonesia (BPS) and a small on-line survey about perception of the older persons. It finds that older persons rely more on family and self-employment rather than earning. The older persons are relatively poor, but they want to retire at age 51-60. Most of them feel financially adequate.

Organised by:

Aris Ananta is a demographer-economist, Professor at the Faculty of Economics and Business, Universitas Indonesia. He was elected as the President of the Asian Population Association (2019-2021). He earned his Ph.D in economics from Duke University, USA.

Evi Nurvidya Arifin is a demographer-statistician teaching statistics/ econometrics at both Universitas Indonesia and Universitas Respati Indonesia. She obtained her Ph.D in Social Statistics from University of Southampton, UK. Currently, they work on population mobility, population ageing, and ethnicity. Ananta also works on social protection; and Arifin, on public health. Both focus their research on Indonesia, with interest on Southeast Asia and Asia.
