

PSYCHOLOGY UNDERGRADUATE CURRICULUM

Notes

- The undergraduate curriculum has two main pillars: empirical/methodological modules and content modules. Empirical modules are either methodological or project-based modules – these modules aim to equip students with empirical skills, which they would then be able to use for knowledge creation. Content modules aim to disseminate psychological knowledge.
- The chart summarises the connections (and pre-requisites) and flow of the curriculum across the four years. The core content modules are colour coded. Elective modules that build on or have the relevant core module as a pre-requisite are colour-coded accordingly.
- For ease of reference, years (1st, 2nd, etc.) are used to represent the ideal and recommended progression, but students are able to take any module at any time as long as they meet its pre-requisites.
- The capstone modules should only be taken in the final year as they are meant to bookend your Psychology journey.
- Masters / PL5XXX modules are graduate level but can be read by honours students.

Legend:

- PL1101E or others
- PL2131
- PL2132
- Biological
- Cognitive
- Developmental
- Social
- Abnormal
- * Additional pre-requisites
- Choice of either module
